

Security Architect (M/F)

To increase our development in the Paris area,, we are looking for a Security Architect.

JOB DESCRIPTION

In the context of transformation projects for our customers (mainly Intermediate-Sized Enterprise), your role will be to support and advise customers in the analysis of the existing system, design, implementation of the solution and the necessary procedures for operational management of the solution.

You will be responsible for:

- Conducting workshops to enable analysis of the existing system
- Proposing solutions during the definition phase (consulting, market solutions, cost analysis, formulation or development of security policy, etc.)
- Writing detailed specifications
- Defining security policy integration and deployment plans
- Managing the deployment of the solution
- Developing recommendations for operational management services of the solution

PROFILE

Engineering school or university graduate with 5 to 10 years experience in security solution consulting.

REQUIRED SKILLS

- Ability to analyse existing systems
- Strong knowledge of security solutions: DLP, PKI, IAM, SSO, encryption, electronic signature, technical security
- Autonomous writing of technical architecture and operational documentation
- Good knowledge of IT
- Awareness of Cloud Computing
- Ability to transfer security knowledge to operational teams

PERSONALITY

- Sense of service
- Good communication and interpersonal skills
- Sense of initiative and high degree of autonomy
- Writing skills (French and English)
- Strong process and procedure development skills
